

Data Center Infrastructure and Security Overview

Data protection is a priority now more than ever before, and Innovative Discovery takes it very seriously. Specifically designed to ensure high availability and data preservation, ID's data processing and hosting infrastructure resides in an SSAE 18 SOC 2 TYPE 2 certified data center. The facility, operated by RagingWire, is tailored to meet the rigorous security requirements of Federal government, government contractors, and corporate enterprises. The facility is a hardened building with no public access, multi-factor identification and multi-level security zones, and digital pan-tilt-zoom cameras that monitor all data center secure areas, parking lots and entrances. In addition to 24/7/365 on-site security personnel, the data center has mantraps and secure doors to prevent tailgating and data floor access. The readily scalable infrastructure and extensive security features were designed with client data security in mind.

POWER

The RagingWire data center offers 14.4 megawatts of critical IT load and 29 megawatts of backup generator power. The infrastructure management system has been recognized as one of the industry's leading systems assuring effective capacity management and energy efficiency throughout the facility.

NETWORK

Multiple Tier 1 carrier options serve our facility with diverse, redundant fiber entrances to the data center. As a carrier-neutral data center, interconnection between various telecommunication carriers establishes flexibility and increased connectivity with the ability to switch providers at any time without physically moving the server to a different location.

COMPLIANCE & CERTIFICATION

In addition to SSAE 18 SOC 2 TYPE 2 certification, ID's data center adheres to the industry's most highly regarded data integrity, security, and protection standards. These standards, specifically FISMA and HIPAA, address the vital protection of sensitive and private client data entrusted to ID. ID is also committed to complying with regulatory requirements set forth by the International Traffic in Arms Regulations (ITAR).
