

DistributID Review

Innovative Discovery's remote review offering, DistributID Review, provides a secure, economical, and well-managed alternative solution by utilizing an experienced and completely remote talent pool in markets across the U.S. DistributID Review provides the flexibility and cost-efficiency you want, with the confidence and security you need.

HOW WE SECURE YOUR DISTRIBUTID REVIEW:

CITRIX

DistributID Review utilizes technology identical to our on-prem solution (Citrix XenApp/XenDesktop). All remote traffic is encrypted via SSL/TLS1.2 and proxied/secured by Citrix ADC and our Firewall appliances.

TALENT POOL

Using remote reviewers from across the country allows us to tap into exemplary talent without geographic restriction. ID's in-depth reviewer vetting process ensures the highest caliber candidates are staffed on every review.

REVIEW MATERIALS

All review materials are available electronically and electronic versions are only accessible via the remote workstation.

REPORTING

ID provides a variety of customizable reporting metrics, similar if not identical to reports provided for on-premise review projects.

USER ACCESS

Reviewer access is strictly limited to the remote workspace - via 2-Factor Authentication - and only includes review materials for the individual's assigned project.

EMAIL SECURITY

All project-related emails must be sent via ID email accounts, which does not allow emails to be sent outside ID's environment. Reviewers' access to ID email accounts are terminated immediately upon completion of review.

DistributID Review excludes the candidate markets of our on-premise locations. The broadened talent pool of nationwide candidates is comprised of strictly remote reviewers.

DistributID Review

What You Need	DistributID Review	ID On-Premise Review*
Candidate Location	Markets across the U.S. (excludes on-premise locations)	Washington, D.C.; New York, NY; Arlington, VA
Environment Security	<ul style="list-style-type: none"> Virtual machine and stealth app detection, ability to blacklist applications 	<ul style="list-style-type: none"> Redundant gigabyte connection Keycard access for authorized personnel only Alarm systems and surveillance cameras
Data Access Security	<ul style="list-style-type: none"> Remote access via 2-Factor Web VPN using Citrix Application Delivery Controller Additional 2-Factor authentication for review access Data exfiltration prevented via Citrix XenApp/XenDesktop NextGen Firewall with Intrusion Prevention/AV/Malware/Webcontent filter End-to-end Communication Encrypted via TLS1.2 Data at rest encrypted using AES-256 Access limited to individual and case as needed Access limited to approved days and times 	<ul style="list-style-type: none"> Secure dedicated network access via Thin Client Additional 2-Factor authentication for Review access Data exfiltration prevented via Citrix XenApp/XenDesktop NextGen Firewall with Intrusion Prevention/AV/Malware/Webcontent filter End-to-end Communication Encrypted via TLS1.2 Data at rest encrypted using AES-256 Access limited to individual and case as needed Access limited to approved days and times
Review Materials	Electronic review materials are only accessible via the remote workstation	Hard copy review materials must remain on-premise, are secured at close of business every day, and immediately shredded upon project completion.
Analytics and TAR	Clustering, categorization, continuous-active learning, predictive coding, near-duplicate identification, email threading, foreign language identification - to name a few!	
Best-of-Breed Technology	Relativity, Brainspace, Milyli (Blackout, Broadcast, Chronicle)	
Reporting	Highly customizable real-time reporting: individual rates of review, overall review progress, richness of responsiveness, privilege, PII, etc.
